

Xtreme Graphics Drinkware

Assurance of Safety and Quality

Xtreme Graphics, part of the IGH Solutions family of companies, would like to reaffirm its commitment to provide its customers with only the highest quality drinkware and in-mold labels.

Recently, concerns have been raised about the use of bisphenol A (BPA) in some plastic products. Some products are marked with the plastic recycling identification code 7 ("Other"), which denotes the use of more than one resin type. It is important to note that any product that is made with multiple resins would be marked with the identification code 7. The use of the code number does not automatically indicate that the product utilizes resins containing BPA.

The materials used in the production of our drinkware are outlined below. Xtreme Graphics drinkware bears the plastic identification code number 7 ("Other"), denoting the presence of more than one resin type. However, Xtreme Graphics drinkware does not contain bisphenol A (BPA) in any of its plastic components.

Lenticular and Infinidepth™ Drinkware

Our lenticular and Infinidepth™ drinkware bear a decorative lenticular label, featuring an Amorphous Polyethylene Terephthalate (APET) lens. This label is securely molded onto the outer cup wall, which is composed of polypropylene.

Film Label Drinkware

Our film label drinkware displays a thin polypropylene film decorative label. This label is securely molded onto the outer cup wall, which is also polypropylene.

Additionally, our various drinkware offerings are all top-shelf dishwasher safe.
